Instrument panel: - four buttons (Ctrl, Shift, Alt, the first slider) are used to control the transient behavior and the amount of saturation the VST adds. After setting up one of those four parameters, your saturation effect is ready to be tested immediately. - The saturation must always be applied after the transient has faded away. Transient control with TesslaPRO may also be done manually, using the slider. - A familiar T/B button is used to switch between two saturation presets: - Normal: pure saturation (convenience preset). - Transient: transient control but no saturation (adjustment slider). - Adjustment: saturation control that works differently than most other VSTs. It uses the standard T/B button to switch between saturation values, rather than the usual way of raising and lowering each channel Extended panel: - Shift is used to add a side chain effect to the saturation. - Ctrl increases the saturation of the VST's left and right channels simultaneously. - Ctrl+Alt decreases the saturation of the left and right channels simultaneously. - Alt increases the saturation of the VST's left channel and decreases the saturation of the right channel. - Alt+Shift decreases the saturation of the left channel and increases the saturation of the right channel. - Alt+Shift+Ctrl increases both the left and right channel - Alt+Shift+Ctrl+Shift reduces the left channel and increases the right channel Plug-in Details: - Fade time (milliseconds) - Threshold of the filter - Output Gain Channel assignment: All the controls are found in the bottom right panel of the GUI. Channels are controlled by either the standard (Signed or Unsigned) buttons or the button found in the extended panel, same as in the KrellPureVerb control. Known issues: - With C4 airfoils, the saturation can be audible, but generally only for high transients (accurately measured). - The default input is a bit harsh, so the singer should consider lowering the threshold. - The extended panel may be a little too far to the left. - When changing the threshold, it may result in unexpected values. Description: ** Frequently asked questions:** Q: You cannot play the plug in in your host (real host) plugin :(Answer: Yes,

TesslaPRO is a VST plugin that uses a high quality algorithm to achieve the very best transient control. The present invention relates generally to food packaging and to methods and apparatuses for producing customized food packages. More particularly, the present invention relates to pre-printed, blister-pack food packaging that accommodates the use of a food tray or other similar food presentation device. The present invention also relates to a method and apparatus for affixing a food tray or other similar food presentation device to packaging. The three major categories of food packaging are bags (i.e., containers that hold food, as opposed to bags that hold food), pouches (i.e., sheets that contain a vacuum and that are sealed to have their interior vacuum reduced) and blister packs. Blister packs are packages that have a plurality of pockets, each of which is provided with a hermetic seal. The hermetic seal secures the food within the pocket and the food package is opened by piercing the seal and removing the food from the pocket. Blister packs of the present invention are similar to blister packs that are commonly used in the packaging of pills and capsules. A blister pack is typically a flexible sheet material that has a first half and a second half that are coupled together. The first half is a molding that has a plurality of pockets. The second half is a flexible sheet material that is received on the first half. In preparation for use, the blister pack is placed on a flat surface, and the first half of the blister pack is folded. The first half is provided with a vacuum within the pockets. A doctor (e.g., a sharp object) is used to pierce the flexible sheet material to create openings that communicate with the vacuum pockets. The doctor is then withdrawn, and the vacuum is reduced to allow the food to be extracted from the pockets. When removing the contents from the blister pack, the user is typically required to use a knife or other sharp object to cut through the seal between the first half and the second half of the blister pack. This can be messy and may require the user to have access to a cutting board or other safe working surface. Further, having to use a knife or other sharp object to open the blister pack could pose a safety hazard to the consumer. It is possible that the user could cut him or herself while attempting to open the blister pack. Thus, there is a need for an improved blister pack and an improved method for opening blister packs that eliminate these problems with
